Abstract :

I am worry and very sad feeling when i m heared the accident happend in Delhi , very shocking when know the place. Month of July place Delhi building housing a centre for coaching IAS aspirants in Delhi's Old Rajinder.It is due to Library place at basement.

I am worry whenevr heared accidental cases and damaged the human life.But i am perticular stsudied the libraray places. As per my expertise and my knowlege we can avoid or provide safe place for peoples.

Creating a safe environment for the public, staff, and collections is a top concern for libraries. As a public space, this sometimes means that library staff are faced with behavior or events that may feel unsafe, uncomfortable, or illegal. Although we can't predict or control every situation, we can be prepared to effectively respond to a range of scenarios.

Key-Words : Data , protection,Accident, Basement, safety, Safety tools , Facility.

Introduction :

We talking about library safety and ultimately people safety. Due to population demanding more space for commercial it impacted on study centre. Very high standard coaching classes colleges are open on main city, City market main rush area of city. It is due to standard, it is due to nearest to city people etc.

Obviously, student will use and studied in there library. Library is the place where is person will be studied to forget the every thing of other activity other tan study. It is necessary for focusing and grasp the knowledge.

Objectives of Research Paper :

1. Cyber attack
2. Cyber thief

3. Studding the accidental case particular in library places.
4. Suggesting the safety tools for Library.
5. Studding the Librarary Infrastructure and provided safety.

Research methodology :

When I am research regarding this subject, I just simply talk about safety of people and country asset damages. We always talk about the digital library Infrastructure modern library. But when we develop any thing then there must be unsafe activity may happen if we do not follow the safety guidelines. As human being always all people not follows the ruls because of them behaviour. In safety word we call it 'behavior safety'. Such situation we must provide robust system or facilities.

We are research the accidents in library building. We study the places impact on library. Safety of such places. Research of new safety tool that must be installed in library places.

Accident in Delhi lets study Three students identified and died in the incident after rain water gushed inside of basement of a coaching institute building in Old Rajinder Nagar on July 27.2024 evening. History damages destruction of the Library of Alexandria, the destruction of Library of Nalanda in India and the accidental burning of the Duchess Anna Amalia Library in Weimar, Germany.

Following must be considered during Library Facility;

1. Library Building.
2. Safety Tools in Library.
3. Responsible Staff and Security.
4. Training

1. Library Building :

This is part of infrastructure. Building must be secure by nature climatic emergencies like earth quick and thundering. Building having species place and dedicated place in building of college or institution. It must be dedicated and isolated from teaching place due to people gathering sound prohibition. Also no heavy vehicles are allowed from outside road. Displayed the out side board no horn and sounded activities allows in this area. Because of reader need silence for concentration.

I have shown few ideal photos for library places, Spy camera it will leak our data from library and loose the library confiditionality.so the building must be provide security from any outer attack.

Safety Tools in Library for protection :

In library AC, fans lights printer, computers etc of electronics thing are using. They should be electrical proof. There must be fire alert alarms install. There should be provide Emergency exit board. Library management should provide training to readers for evacuation on monthly or quarterly basis. During entry gate there should be checking for prohibited the any type fire equipment or tools. No chewing, No other entertainment accessories carry, No writing on wall or facilities accessories. Display the time table of opening closing and holiday list.

Building must be fire NOC approvals.

Place of library should be species and place in open space. Library can provide CCTV for any abnormal activity monitoring in inside and outside. There is provision of handling the natural climate attack. If we installed digitals library then there must be electrical safety and building safety tools.

Responsible Staff and Security :

Staff in library must be behavior clam. They must be care taker of readers. Monitor and control the silence of library. Advise the people to keep silence and read the books. No meeting and discussion allow in library. All entry readers should follow the rules of library. Book must be entering in issuance of digitally issuance record. In and out entry must be follows. Follows the engineering rules for preventive of all safety facility. Preventive maintenance should be done and recorded for future any investigation.

Training and Mock drill :

Different people will use the library for study. It is not possible to give training of every new person and do the mock drill. So do the Indian rail copy, every day every training different and bulk people are travelling from train. Train authority can giver training to every new passenger. So they displayed the board of safety guideline on every were and passages. Hi9ghlighted [poster they use. Every person looks this poster once in boggy. Due to every time if any person will look and read automatically they learn about the rules and safety parameters.

This same formula we can be use in library. Displayed the safety board and training given to fix staff. So they immediately take action during emergency. Take people will send to safe area or assembly points.

Once the person enter in library staff shall be give short brief for safety emergency evacuation without take more time. Indication in library will also work for self-training. Safety equipment can be available on easy place. Extinguisher normally not required much awareness how to use bcz due to digitalization and pictorial display will help them how to

use.

Library is safe place not possible to happened any abnormalities. This is wrong our house also safe place but no guaranty of any fire emergency. Your neighbour fire also destroying your home your library. So the evacuation and emergency plan of every new place, hall, talkies, any hug program for our safety. Monitor the people for behaviour safety. To avoid any happening.

In library fire Triangle is available Book for fuel Oxygen from air so the need ignition it can be available by electric spark, or any human error by cigarette etc. Main source is from electric equipment and wiring. Using of low-quality wiring, electrical equipment make the accidents.

Dr. Steve Albrecht has trained thousands of library employees in 28+ states, live and online, in service, safety, and security. His programs are fast, entertaining, and provide tools that can be put to use immediately in the library workspace with all types of patrons. "Safe Library" training programs for library staffers and leaders cover service, security, safety, supervision, and even a little stress management. Our goal is to help to keep all library employees physically and psychologically safe, making it easier for them to serve all patrons in their facilities.

Libraries are faced with problems of user behavior that must be addressed to ensure the effective delivery of service and full access to facilities. Library governing bodies should approach the regulation of user behavior within the framework.

1. Cyber attack and cyber Thief :

Now a days we heared cyber attack. In past they attck on big company is secret data computer software. And by black mailing they recovery cror of maney from companies. Companies also pay behalf of companies impartant data. Means they know the price or value of data is more than the money. Cyber attack not stop up to big companies because big rich companies updated our software by protection by antivirus, develop the software for any outer attack. So now the cyber thief concentrate on other soft target. School , college , hospital amall firms atc. In school college main data base , data bank is library and they corrupt the libraray books and entry data also.

So the library need protection for such attack. Local made or develop sofware not able to protect the such attack.because now the cyber thief is very inteligent and polic also not able to find out there location. Due to government form the separate cell for this type of complaite/ FIR. Cyber thief meanss a invisible attack so with in hrs with in month not possible to grap them.Cyber thief as quification enginners , software masters. So better than corrective action preventive if much better.

Conclusion :

High quality of protection need to adop ti library data protection. Many braded companies provide contract based protection for data.

Linrary place safety audit is mandatory with out NOC do not permitted such place for working. Staff should be ready for any emergency,
